Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 29-31 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Anand et al(5435836).

Anand et al teaches an installation for implementing the method of claim 1 comprising at least one feedstock gas supply pipe(7), at least one line of a fuel gas mixture distribution network(25), at least one PSA unit(103) for separating gases by adsorption having one inlet(at 7) connected to the feedstock gas pipe, a production gas outlet(9) and at least one waste gas outlet(11), , the first compressor(105) connecting the waste gas outlet to the fuel gas mixture distribution network line, and the second compressor connecting the fuel gas mixture distribution network line to the inlet of the PSA unit. Examiner notes the preamble(an installation for implementing the method of claim 1) is an intended use limitation and the structure of Anand et al clearly anticipates claim 29 without relying on the method of claim 1.

Anand et al further teaches wherein the second compressor is placed in a pipe connecting the fuel gas mixture distribution network line to the feeds'ock gas pipe.
Anand et al further teaches wherein the second compressor is connected to the fuel gas

mixture distribution network line upstream of the fuel gas mixture distribution network connection to the first compressor.

Allowable Subject Matter

Claims 23-28 are allowed.

Claims 32 and 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 32 recites "wherein said first and said second compressors use common subassemblies". Anand et al teaches first and second compressors, but does not teach wherein the first and second compressors use common subassemblies. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide wherein the first and second compressors use common subassemblies because Anand et al does not suggest such a modification.
